Hydraulic Power Supplies

Team Corporation manufactures a variety of Hydraulic Power Supplies for use in vibration test systems and other high-precision servo systems.

The selection of the HPS is based largely on the selection of the servovalve. The HPS and servovalve are selected to provide the desired velocity.

In addition, *Team* HPS's are remotely controlled and monitored using the *Team* 1510 Hydraulic Pump Controller.

Features:

- Built-in heat exchangers with water saving valves
- High and low flow modes for safe start-up
- Filtration to keep the oil in the ISO 15/13/10 condition required for servosystems
- Health monitoring sensors including oil temperature and level, pressure and filter condition.

Applications:

- Hydraulic power supplies for vibration test systems and other precision servo systems.
